

AMENDMENTS TO THE CLAIMS:

This listing of claims will replace all prior versions and listings of claims in the application:

1. (Currently Amended) A mobile communication terminal comprising:
 - a first radio unit configured to make radio communication with a base station over a first radio channel in accordance with a first radio communication system, the base station via which the mobile communication terminal is connectable with a first communication terminal;
 - a second radio unit configured to make radio communication with a second communication terminal over a second radio channel in accordance with a second radio communication system; and
means for connecting the first radio channel and the second radio channel, such that a communication channel between the first communication terminal and the second communication terminal can be established[.].

wherein the first radio unit and the second radio unit are configured to selectively make simultaneous communication with the base station and the second communication terminal, respectively.
2. (Currently Amended) [[A]] The mobile communication terminal according to claim 1, wherein the first communication terminal is connected with a public network over a wired channel.

3. (Currently Amended) [[A]] The mobile communication terminal according to claim 1, further comprising means for obtaining a telephone number of the first communication terminal via the base station when the first communication terminal is connected with the base station, wherein the connecting means transfers the obtained telephone number to the second communication terminal over the second radio channel.

4. (Currently Amended) [[A]] The mobile communication terminal according to claim 1, wherein a transmission power of the second radio unit is set to be sufficiently small compared with that of the first radio unit.

5. (Currently Amended) [[A]] The mobile communication terminal according to claim 4, wherein the transmission power of the second radio unit is 1/10 or less of the transmission power of the first radio unit.

6. (Currently Amended) A channel connection method for a mobile communication terminal connectable with a first communication terminal via a base station, the method comprising:

making radio communication with a base station over a first radio channel in accordance with a first radio communication system;

simultaneously making radio communication with a second communication terminal over a second radio channel in accordance with a second radio communication system; and

establishing a communication channel between the first communication terminal and the second communication terminal by connecting the first radio channel and the second radio channel.

7. (Currently Amended) [[A]]The channel connection method according to claim 6, wherein the second communication terminal is connected with a public network over a wired channel.

8. (Currently Amended) [[A]]The channel connection method according to claim 6, further comprising:

obtaining a telephone number of the first communication terminal via the base station when the first communication terminal is connected with the base station; and transferring the obtained telephone number to the second communication terminal over the second radio channel.

9. (Currently Amended) [[A]]The channel connection method according to claim 8, further comprising

making a call to the first communication terminal from the second communication terminal in accordance with the transferred telephone number.

10-11. (Canceled)

12. (Currently Amended) A mobile communication terminal comprising:

a first radio unit configured to make radio communication with a base station over a first radio channel in accordance with a first radio communication system, the base station via which the mobile communication terminal being connectable with a first communication terminal;

a second radio unit configured to make radio communication with a second communication terminal over a second radio channel in accordance with a second radio communication system;

means for receiving information of a predetermined type from the base station over the first radio channel; and

means for sending the received information to the second communication terminal over the second radio channel[[.]] while receiving the information,

wherein the first radio unit and the second radio unit are configured to selectively make simultaneous communication with the base station and the second communication terminal, respectively.

13. (Currently Amended) [[A]] The mobile communication terminal according to claim 12, wherein the second communication terminal is connected with a public network over a wired channel.

14. (Currently Amended) [[A]] The mobile communication terminal according to claim 12, further comprising means for obtaining a telephone number of a calling party via the base station when the radio channel is connected to the base station, wherein

the sending means transfers the obtained telephone number to the second communication terminal over the second radio channel.

15. (Currently Amended) [[A]] The mobile communication terminal according to claim 12, wherein a transmission power of the second radio unit is set to be sufficiently small compared with that of the first radio unit.

16. (Currently Amended) [[A]] The mobile communication terminal according to claim 12, wherein the transmission power of the second radio unit is 1/10 or less of the transmission power of the first radio unit.
